In search of mental sanctuaries: case study of self  
audio visualization

dir /for\_space

state=corrupt

four 10 minute videos played in loop mode

Audio visualization containing recordings gathered four times a day - morning, noon, evening, and night. Two different locations are at play - an ethereal forest environment presented in gray and spikes of red stimulated by an uneasy shopping center. A form of juxtaposition is created to display the contrast of emotional climates in different audible circumstances.
